SEFER TASDEMIR

21 YEARS OLD - MASTER'S STUDENT IN COMPUTER SCIENCE

+33 6 52 65 60 65
tasdemir.sefer74@gmail.com

*Holder of a **Bachelor of Technology** (BUT) in **Computer Science**, **AGED track** (Data Administration, Management and Exploitation), and currently enrolled in a **Master's in Computer Science**, I am looking for an **internship** of at least 308 hours as part of my studies. **Pragmatic** and **autonomous**, I want to put my skills into practice within a team **whose values I share**.*
***Portfolio** : sftss.github.io | **LinkedIn** : linkedin.com/in/sefertasdemir*

SKILLS

- **Databases** (SQL & NoSQL) : PostgreSQL, SQL Server, Neo4j, MongoDB.
- **Programming languages** : Python, R, SQL, DAX, Power Query (M), C#.
- **Data engineering** : Azure Data Factory, SSIS, SSAS (Analysis Services / OLAP Cube), Knime.
- **Data science** : Machine Learning (MLxtend), NLP (Dialogflow), data modeling.
- **Data visualisation** : Power BI, Advanced Excel (VBA), SAP BO.
- **Methodologies** : UML, Git, Visual Studio, ArchiMate, Fabric, Power Automate, Office.

PROFESSIONAL EXPERIENCES

Work-Study Program – Data Analyst

Autoroutes et tunnel du Mont-Blanc, September 2025 – September 2026 (1 year)

- Designed a decision-support architecture on Microsoft Fabric, with data extraction from SQL Server, development of ETL pipelines (SQL/R) and OLAP modeling. Deployed automated Power BI reports to improve the monitoring of operational indicators.
- Design and integration of an OLAP data model, followed by the creation of a Power BI dashboard.
- Built an Excel workbook via an R script using radar data to monitor traffic on the network.
- Handled internal requests by qualifying needs and formatting raw data.
- Migrated data from an Excel database to SQL Server.

Internship – IT Maintenance Technician

Autoroutes et tunnel du Mont-Blanc, April - June 2025 (3 months)

- Creation of Power BI dashboards with a new user interface and Power Automate integration.
- Optimization of database management processes with documentation. Configuration and migration of GLPI from a Windows server to a Linux server.

ACADEMIC PROJECTS

Open Food Facts – Decision-Support Architecture & Machine Learning

- Designed a PostgreSQL OLTP database, then a star-schema OLAP data warehouse, with a transformation pipeline between the two via Azure Data Factory.
- Developed two Machine Learning models in Knime (regression, neural network) to predict the NutriScore and a composite environmental-nutritional score.
- Built Power BI dashboards to track nutritional scores and sales (by category and geography).

Neo4j Social Network – Graph Database (NoSQL)

- Modeled a social network as a graph (users, relationships, interactions).
- Wrote Cypher queries for community detection and centrality computation.

Uber – End-to-End Application Design

- Produced complete UML modeling (use cases, classes, conceptual/logical data models) and developed a Laravel/PostgreSQL application simulating a ride-hailing service.
- Implemented security measures (encryption, XSS/SQL injection protection, GDPR compliance) and Power BI reports (revenue by vehicle type, geographic analysis of trips).

Market Basket Analysis with MLxtend – Data Mining

- Cleaned and structured a transaction dataset (typing, normalization, semantic filtering of irrelevant rows).
- Extracted association rules with the Apriori algorithm to identify the strongest product associations, with Python visualizations (pandas, seaborn).

CERTIFICATION

Master's in Computer Science
Lumière University Lyon 2, 2026 – present

BUT in Computer Science, Administration, Management and Exploitation of Data track
USMB - IUT Annecy, 2023 - 2026

French General Baccalaureate with honors, Advanced Mathematics option
Lycée Guillaume Fichet (74130), *2020 - 2023*

LANGUAGES

- French (native)
- English (professional - TOEIC B2 - 900 points)
- Turkish (native)
